hitherto got along without a money of its own, is taking steps toward establishing a currency and coloage system on a gold basis. Most of the citizens are now using for their purchases bars of salt, rifle cartridges, and even empty bottles and tin cans. The money necessary in international dealings has been furnished in limited supply by Maria Theresa Thalers, introduced a number of years ago from Austria, and by a small amount of paper money issued by a branch of the National Bank of Egypt established in Addis Ababa, cap-Ital of Ethiopia. This bank is to be purchased by the Ethiopian government as a first step to its program to

set up a currency and colonge system. When Ethiopia Issues her first bank notes and certificates, these bits of laked paper will represent the latest link in the very long chain of the eve-Aution of money. In earliest times with traded or bartered one profust or article for another. But the need for a common denuminator of value became apparent even with the first glimmerings of civilization. The skins of animals served in this way when man was still a hunter, while shells became the first money of tribes living near the sea. When man settled down and became an agriculturist or a berdsman, grain and cattle came into use as his measures of values. The ox was "big money," the sheep "small change."

There were certain disadvantages in using live stock as money. For one thing, it might walk away in the night; for another, it consumed much provender. There were difficulties about very small change for the purchase of such edibles as kettles of fish and messes of pottage.

The human geography of the Near East, which had been pastoral about this time got an industrial urge. A way had been found of extracting a metal from the earth of the Island of Cyprus, handily set in the eastern Mediterranean. The Romans later twisted the name of this island in such a way that the modern word "copper" was derived from it.

How Copper Became Money. Copper pots began to appeal, and, like cattle, were universally prized. Merchants would exchange whatever they had in their stalls for copper pots, and the demand for them was more nearly universal than for any other object. The copper put was,

therefore, money. Then into this region came one imbued with an idea of importance. Instead of presenting pots for use in facilitating barter, he would tender the copper of which they were made. He would offer it in a convenient form, made up into a strip which he called obolus. No definite idea of its size survives, but it was said that six made a handful. The obolus marked a great advance toward the use of coin.

The scene shifted to the west, Italy, as it awoke from barbarism, adopted unit of copper as a measure of value. It called the unit as, a Roman pound of 12 uncine, or ounces, and it came Into general use.

Copper served the purpose of money because of its intrinsic value. The as had the value of a pound of copper. Human nature being the same then as now, it soon came to pass that people made the as in a weight a little less than a pound and profited to the extent of the metal thus saved. They learned to mix certain quantities of baser and cheaper metals with the copper and their currency detasorated.

Thus a step toward the development of actual money was forced on the national Coverning powers found It becessive to step leto the breach, to test metals used as money, to put their stamps guaranteeing quality and weight upon them, and by this avenue copper colus arrived.

As the centuries passed in the Mediterranean area, copper became plentle ful and its purchasing power de-

Rome was getting much of the earth of Cyprus. Thus it developed that an average householder of ancient Home, soing to market to buy for a feast day, Would need to pack a donkey to bear the weight of the copper for his shore

The metal came to be too bulky in proportion to its value. Yet it held the count of Schilek has grown and us place until another metal appeared prospered.

MITHER EARTH RECEIVES HEAT FROM SUN'S HAYS. The earth's heat and light come from the sun's rays and not from the interior of the earth. The earth is dependent on the sen for both heat and light, and no form of life could exist if the influence of the sun were withdrawn. There are several reasons why high aithfudes are colder than low ones, even though they are never the sun in the daytime. The air in high aitiindes is thinner, absorbing less test from the direct rays of the sun because it has less carbon double, water enpor and dust; telng Glanco it is less exective in retaining the heat radiated from the earth below. The wind in high aftitudes keeps the air 'n contact with the heated mountom seles in constant motion. There are likely to be many cloudy days to mountainous regions and the clouds shelter the mountains from the gun. The site of a mountain toward the comfor may racelye the sun's resame perpendicularly than a terrace and may become very had in the degitine cooling of rapidly at night. Kow Fiches Use Sence

of Small to Cat Food The sense of small is highly developed in fishes, and this sense probably plays the leading role in obtaining food. Scientists, however, have not yet been able to determine accurately the relative extent and intensity of precition of the various sense orgars in fiches. "From what is known at tresent," says the United States tor an of fisheries, "It is believed that the sense of smell, along with that of touch, plays a greater role in the life of a fish, as far as obtaining its food concerned, than that of sight. The se of sight in fishes seems to be ited more to the perception of desing lights and sharlows, since a a will supp more quietly at a morobloct." There is a common but remeans notion that the easmell with our gils. They smell with their

How Electric Current Acts Quality from Thomson's "Catilina of ience": "In freelf on in marcel canit refer carrying current is not dancerorn. A ford tony perch on it with in in My, and man what reads the or w pulated for the ground. But If a person two from both the inculated conductor and the purt or the other conductor, he completes the circult and may be billed at once, in conthinous current circults for traction purposes it is usual to insulate the positive conductor and use the fails as the return or negative comfunter."

es,-Pathfinder Mugazine.

How Neon Signs Are Made Seen is a cobriess, inactive gas, which occurs in the atmosphere. Neon has the property of glowing with a pseuliar brilliant flery-red that when an electric current is passed through it in a near vacuum, For advertising purposes the gas is put into hellow glass tubes, which are twisted by a combined heat and blowing process into the required shapes to make script letters. The air is removed by n racuum pump. If a few drops of mercury are inserted in the tube of neon, the light becames a brilliant blue. In a rollow-tinted tube it appears green.

How Fog Can Be "Lifted"

For is one of the motorist's worst encinies. But by means of an attachment to the exhaust of a car, it has now been found possible to create a rising current of heated air which literally lifts the fog for about 10 feet before the front wheels. The process is rapid enough to allow a forward speed of about 15 miles per linur, no matter how dense the for may be This invention for dissolving log can he attached really to the car, and is even simpler in operation than the or dinary win ishield wher.

How to Test Weter

Here is a simple way to test the purity of water: Put half a flot to n elean bottle, and old a few geolesof lump or loaf organ. Make the bot tin tight—a glass storper is preferred Place the bottle in a warm, well lighted room If it remains clear after an exposure of eight or ten days it is safe to use: but if it becomes turbil it is impure and unsafe to drink.

How Patent Grant Operates A patent grant conveys to the owner of the patent the exclusive right to nake, use and sell, and to grant to others the right to make, use and sell the think patented within and through out some specified part of the United States, for the term of 17 years,

How Tone Are Prepared For green ten the leaves are with ered by stesming in a perforated exito. der or boiler, thus retaining the color. in black ten the leaves are dried and turn black.

Everything Routine in

Life of Modern "Bossy" Golf has crowded the cattle out of the pastures and the cow of tomorrow will be lucky if the ever gets n look at the green fields. The production of milk has been reduced to t yers mechanical operation and the cow's life will consist of a rumble three times a day from her stall to n revolving milking platform and then back to her stall. The animal is kept so immaculately elean that her alsters of the fields would not be able to recognize her. It is the intest method of producing milk and is based on the observations of a group of scientific gentlemen who have given much thought to the subject and the new method has been in operation for a time at one of the plants of a wellknown company specializing on superclean milk for baby's use. It represents a complete revolution of the life of the cow, but the unimals soon get used to the routine and are said to like it. The cow is released from her stall and she walks along a tile-coated corridor to a revolving platform which accommodates 50 animals. As the platform revolves the animal is

washed and then dried in a curre of warm our and given office aftentions to secure her period saultury cleanliness and after this she is milked by machinery. By the time the great turntable makes a camplete revolution the operation has been completed and the cow is automatically released and she steps from the moving platform and back to her stall. Her drinking water is sterlibed and her food is analyzed and electricity supplies a substitute for the delicient sunlight.

Cotton In History

Cotton has been used for clothing by some of this world's inhabitants from a very early time. But it was first introduced to Europe from Italia. and the Arab traders who were the middle men in the transaction passed along their own come for it -- quent or outn. This Arab word, in various, forms, has entered into most of the European languages. Thus there have been derived not only the English "eton," but the French "cotton," Germ to "kattun," Italian "cotone," Portu guese "cotoe," and so on. The or g that word was probably a tame applicat to a people who employed cotten or to a place where it was grown.

Had It Coming

* Firing Furnaces Not ? in Her Line

By M. AMES

******** (G) by McClura Nawsporer Syndicate.1 (WNU Sarvica)

A Billie LOD was struggling with the fornace, She pushed the wrong dampers out, and she jushed the claim damners in: she added pafurlously with the cost shovel. Sin went through all the futile motions of those unaccustomed to arson or coal furnaces.

The glant firebox with its bed of graying ashes looked for all the world like a toothless old crone, grinning at her deficulty. The fire wouldn't burn, lust to be mean. That hateful Dector Grant was coming to tea, she supposed; the living room was ley; and where, oh where, was that furnace man?

The marks of the struggle showed plainly. Not on the furnace. That exasperating structure had settled placidly for the next move. But Abthe corner of her left blue eye to the dimple at the corner of her crooked red mouth. Her short copper-colored curls were fairly standing on end. And though the combination of her hair and eyes and lips might in other circumstances be considered angelic, there was an expression on her face just then gulte in keeping with the poker in her hand.

Abble Lou had come from the city to take care of Grannie. Poor Gran, upstairs in bed, freezing perhaps. In the city when one wanted heat, one spoke to the superintendent; in the country evidently you sent for france men, who didn't show up for hours. The whir of the front door bell

sounded faipily. Relief at last! Abble Lou gave one vicious poke at the ashes. "That for you, and that!" Unmindful of her sooty face, her rampled bair, or Gran's old gray sweater donned for warmth, she dart-

ed up the stairs. "It's about the you came," she stormed at the swang man on the doorstep, "We're free ing to death Gran may be dead this very minute. This war, please'

"Inshe wo'd botter see to your grandmother first," said the young man cooly, "Nonconse, she's all right. This fire

has to be started. It isn't your fault we're not stiff and stark by this time. A very disagrecable man is coming to ten at four o'clock, and it's getting late. Please hurry,"

The young man followed meekly. Abble Lon was too Impatient, too absorbed in her task of fire building to give the young man much heed. If she had, she would have realized he was hardly, attired as a turnace man, ful, held a touch of amusement.

Not until the fire was blazing merrily, the dampers in and out as dampers should be, did Abbie Lou take n good glance at her rescuer. His eyes were brown, his hair was brown. he was very tall, and there was soot on his face, too. The ensemble was decideally pleasing.

"And now let's take a look at your grandmother." Abble Lou started. "Just who are

you anyway," she inquired. "You don't look exactly like a furance mah-Don't tell me I've made a mistake!" "It was a lucky mistake for me," the young man grinned. "You're just os adorable as Gran said you would be, and, after all, I had to build the fire. I couldn't let out only hope of introduction freeze to death."

Abble Lou blushed slowly. "You're Doctor Grant?" "Yes, I'm Doctor Grant," he admitted. "Why? Do you think you're

not going to like me?" Abble Lou had the grace to look embarrassed, but she faced him squarely. "I'd just made up my mind not to, Granny's done nothing but rave about you for the three days I've been here, and it didn't seem possible for any-

one to be as nice as she said. I was sure you'd be too good-looking, and very concelled, and I wouldn't like rou a bit." "But now?" prompted Doctor Grant. "Well, you did build a grand fire. and the smudge on your nose makes

you look very distinguished." "And that smudge on your face makes you look very, very adorable. As the doctor reached for the poker, still in Abbie Lou's grasp, his hand met hern, closed over it with a delighted little squeeze.

"Do you think, dear," he asked, "It would seem too sentimental to be married in the cellar?" Abbite Low lowered her eyes. "Per-

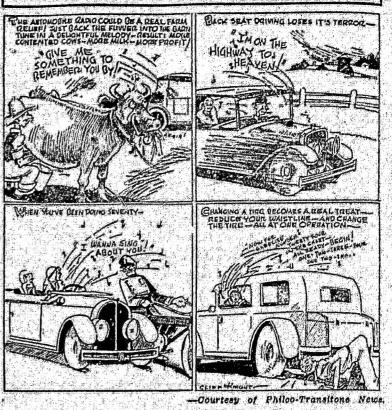

haps wo'd better have Granny intro-Laughtog, the two ran up the states, still brid in hand.

Early American Newspapers

The first daily newspaper in the United States came into existence in Pultadelpida on September 21, 1781, when the tri-weekly Pennsylvania Packet and General Advertiser became the Pennsylvania Packet and Daily Advertises. David G. Claypool became foint publisher with John Dontop, who, since he founded it in 1771, had published the paper continuously. After golds through several changes of ownership it was finally absorbed. in 1830, by the Philadelphia North American, a new daily, which con-

Once Land of Foreste In the carly days of American his tory the entire country with the exception of the treeless plains in the conreal part was foughtly worstrik.

New Aspects of Automobile Radio

HERE Cliff Knight, widely-known syndicate artist, presents his conception of some of the uses to which radio sets specially made for automobiles may be put. His views are particularly timely in view of the announcement that half-a-dozen automobile manufacturers are installing radio antennas as optional equipment in their cars.

Playful Cockatoo Costs Theater Owners \$350

Syrneuse, N. Y. - A cockatoo's "lunge" was worth \$250 to Mrs. Julia Chambers, Julyo B. B. Parson decified. Mrs. Chambers, in her sult against the Salina Jefferson corporation, operators of a theater here, alleged that the cockatoo lunged at her while she was untching it in the lobby of the theaier; that she fell backward; that she suffored a severe head injury and fracture of a wrist.

Vitamins and Teeth Science has shown that the teeth o barbarous and savage peopler were su perfer to these of moderns because of the citamins contained in the pareline food. Add all the vitamins to the diet and especially the dental vitamin D found in milk, it you would have healthy and heautiful teeth, says Dr Don C. Lyons in Hygela Magazine.

The Applan Way The Applan way of Rome, the an clent Vin Appla is the great grandsire of all good roads and of noble avenues which for ages has outshope the U ter den Linden und Fifth avenue. It stretched from Rome to Brindist. I was built by Applus Claudius in B. C. 312 and was called the Regina Viarum. the queen of roads. Today you may walk it in Rome, Panked by its great tombs of the Scipios, Octavia, Seneca

Why From Left to Right There has been count! Table sar ation from time to time in the line tion of writing. The Greeks at firs wrote from right to left, and after

vard adopted the method called box trophedon, from the motion of the plowing-that is, alternatively free right to left and from left to right Writing from left to right is believe to have been introduced in the ne of Homer by Propapides of Athers.

Why Fascist Elack Shirts

At the time that Iroly was free from Austrian dordination and allated into Vulted Italy, Garibaldi sia his following of putriot soldiers were noticeable features. They adopted a a uniform the red shirt, and somewha after the same manner Mussolini, light ing to overthrow Socialism by l'a cism. inaugurated the costume of the idaeleshirted treeps, or Fascisti.

By EDWARD W. PICKARD

Hoover journeyed from Washing. ton to Akron, Ohlo, and there graciously christened the world's largest dirigible, the Akron, which has been built for the United States navy. As the First Lady pronounced the name of the huge airship, the tradition-

al ceremony of releasing a flight of white pigeons was oberved. Before the christening the ionster was brought to life by the infation of twelve of its cells with helion gas, enough to raise it about ten feet from its cradic. It was then walked" sideways forty feet and cared as in actual operation by sand allast, so it was really affoat when irs. Hoover set free the homing pigons to carry messages of the event o the various navy stations.

The trials of the Akron will take dace in the latter part of August or early in September, under supervision te board of inspection and survey. They will consist of five or six flights. of various duration, including one of orty-eight hours, to determine speeds, ful consumption, endurance, structurintegrity of parts and other details of performance and handling.

if the trinis prove satisfactory the Navy department will accept the Akon and have it flown to Lakehurst er commissioning and docking.

JORE trouble for the federal farm board developed during the week in the form of "civil war." It is now under fire from within its own ranks is the result of the light between the amers' National Grain corporation and the Farmers' Union Terminal aseciation of St. Paul, on the one hand, ind the Northwest Grain association

Like others the Northwest Grain assolution protests that the governrent's helping hand is not being untched out to all alike. Ten other concratives and form organizations es supported a resolution to that

Uside the board has taken is that fice management of the Parmers' Mount. Chairman James C. Stone leaned that the board would not see competition among the portiset co-operatives, which was tantubunt to saying that the Northwest a arrectation must come into line in burmers' Union Terminal usso: n contains many of the old Nontuan leaste er wd. Among its acsupporters has been Senator Ger-CI P. Nye. Insurgent Republican of th Dakota.

wille the row goes back to fundaetal differences between the two cars, the more immediate enuse of edists lies in the recent policy of s Farmers' National to take over parketing activities of the twenthe co-operatives composing its list steckholder members.

the Farmers' Union Terminal assoon was the first co-operative in fafarmers' National and it now owas per cent of the Farmers' National th outstanding. Acceding in the aram of the central organization, sold out its marketing facilities to Farmers' National. The North test Orain association, however, refield to sell. Briefly, it gave as its erson that with the power exercised the Farmers' Union Terminal aswhite in the National and the close the existing between the terminal asestation and the National manageent. It soon would be forced entirely ed of the picture.

DRESIDENT HOO- P ver, in a long enterence at his Vir U tola week-end camp vit Secretary of La-* Doals, virtually pleted his plans the organization table agencies to to for the mem-

covernment and sed and others in dress doring the The winter Air. ever is unclanged in his opposition

solving like a dole, or direct govtinent pseistance, and will continue rely on organized charity. He is ding, however, that the army should used as a distributing accept, as is in the times of flood divistors. 2) to communities where distress is are there will be loans of amy their and supplies. The Red Cross If he, as heretofore, the backbone of t relief organization.

Mr. Donk presented to the President report from the recent survey of weltlong throughout the country. ther of them would make public it estimate of the number of people be would be out of work during the oming winter, but both admitted that would be little different from last

linwever, it was learned that the 's ident, as head of the Red Cross, bus trested the Red Cross to start a new drive to reise funds and that the ma-Crary land already heart for in mor-

RS, HERBERT | tion. He also has issued the necessary instructions to the army to have concentrated at the various bases, most of which are located near the bly industrial centers, all of the sucplus property available should they be called upon to use it.

> BY AN almost ununimous vote in a provincial plebische Catalonia gave its enthusiastic approval to a constitution which defines the liberties of the people and fixes the status of the province as antonomous within the Spanish republic. If this is not granted by the new government of Spain, the Catalonians seem willing to fight for it under the leadership of that elderly patriot, Col. Francisco Macia. The apparent danger of Catalonia lies in the fact that Macla and his followers have given commitments to the syndicalists who form the huge labor organization and who are nlready threatening a general strike it their demands, including higher wages for family men, are not granted. Macla promised his friends he would be able to get out of this difficulty when the time was ripe.

FURTHER relief was given ermany, in accordance with the decisions of the London conference, when the board of governors of the Bank for International Settlements at Basel Switzerland, ordered the extension of its one-fourth share of

the \$100,000,000 lonn H. Wiggin, to Germany for a maximum of three months beyond August 5, the date it fell due. It was assumed this action would be imitated by the other participants in the loan, the American Federal Reserve bank, the Bank of England and the Bank of France. The governors set Saturday, August

3, as the date for the committee of inquiry into German credit needs to begin its work. The meeting was delayed until then to awnit the arrival of Albert Henry Wiggin, the American member. It was believed that Mr. Wiggin, who is chairman of the board of the Chose National bank of New York, would be selected as chairman of the committee. There are ten members in all, and their principal task will be to study the possibilities of converting a portion of Germany's short-term credits into long-term credits. There were indications that the French would try to convert the committee into an inquisitorial hody.

New York bunkers deligated to study the same question of German short-term credits were busy throughout the week with the technical details of the problem, but the prospects of reaching an agreement were said to be

Through Ambassador Sachett the suggestion was made to Berlin that Germany purchase large amounts of wheat and cotton now held by the federal farm board, and it was promised that long-term credits would be arranged. The administration in Washington thought this would both aid Germany and relieve the farm board, and the idea was well received in Berlin. Germany is especially eager to get American cotton and for this reason might also take the wheat, although unofficial reports said slie had already contracted with Rumania for wheat. She needs, in addition to her own production about 25, 0,000 bushels of the grain.

Win it see od such a deal minit he put the aigh, objections to the sale of the farm hourd's cotton to Germany came from the southern producers. Senator William J. Harris of Georgia sald he had received a pro-est to the effect that such a sale would tend to degrees the world price of cotton and that the policy of the farm board should be to hold its cotton and encourage purchases threet from the pro-ducers. There were indications, ton that some foreign count*! a would oppose the wheat and rotton proposal on the ground that it would on tantamount to dumping and would but flormany in an advantageous position over competitors

THERE was not promise A versal grief and anxiety when it was reported that Thomas A. Edison bad cot 4 % A. Edlson had cot-lapsed at his home in Liewellen Park, West Orange, N. J., and was at the point of death, Mombers of the aged,

entor's family were amoned in baste and his personal phys. T. A. Edison. Howe, sped to his bedside by aleplane, Mr. Edison was indeed in a precurious state, but three doctors, offer thorough examination, said be was tur in immediate danger of death. He is eighty-five years old and is aufforing from dishetes, bright's disense and a unch picers, as well as urante possing, but he declared he was too busy to die now and that he would sale be able to resoure his

work. His determination apparently conquered and and within a few days Doctor Howe acknowledged that the "Wizard" had a good chance of beingable to return to his laboratories.

Mr. Edison soon was recovered sufficiently to sit in his library and read the newspapers, and he wanted to smoke, but this was forbidden, He was sleeping well, and his son Charles said his father was "in good spirits and feeling very chipper," His health had been falling since his return from Florida seven weeks ago and the collapse was no surprise to the physicians or his family.

CHARLES BOYD CURTIS of New York, minister to the Dominican Republic, has been appointed by President Hoover to be minister to El Salyador. His place in Dominica is filled! by the appointment of H. F. A. Schoenfeld of Rhode Island as minister there.

TWO more reports from the Wick-- ersham commission were made public. One deals with the federal courts, those of Connecticut having been studies in especial detail, and the conclusion is reached that prohibition cases dominate "the whole character of the federal criminal proceedings, Prohibition cases in the Connecticut district increased from 60 per cent of the total number of cases in the first year of the study, the commission reported, to \$1 per cent in the study's third year which ended June 30, 1930. The total increase in cases had been furnished by prohibition cases, it was explained; other types remained sta-

The other report deals with the police of the country, and it is asserted that they have forfelted the public confidence because of their "general fallure" to perform their duty. This is blamed mainly on political power. pull and protection, the short tenure of office of the average police chief and the burdening of the police with a multiplicity of duties. Milwaukee was lauded as a city with an enviable record for the prevention and prompt detection of crime, and the reason was found in the fact that it has had only two chiefs of police in 46 years.

NEW YORK is in the threes of an epidemic of infantile paralysis, the total number of cases reported since July 1 belog well over eight hundred. The death rate is about 12 per cent. The other day Gov. Franklin D. Roosevelt gave one

Gov. Roosevelt. pint of blood to ald in the fight against the disease. It went to the state health department for use as a serum. The governor was attacked by the disease some ten years ugo, but has practical ly recovered, and dectors consider tils case remarkable. Since blood from victim who has recovered is considered the best serum for treating others, the governor's action will prove of taugible help to the state authorities.

medical information bureau of the Acutemy of Medicine, announced that more than lift former paralysis sufferers and d-mated from 250 to Birt ruble centimeters each of their blood ne the Cornell medical school.

Mayor Janes J. Waller of New York city, threatened with a physical breakdown, sailed for Germany to take the water cure at Carlshad. Ills blood pressure is low and his heart is weak.

GOVERNOR MURITAY of Okla-homa, having been somewhat worsted in the "war of the bridges" ie waged with Texas, found use for his National Guard in the oil controversy. He made good his threat to close down all the oll wells in the state except the small strippers if the price of crude oil were not put at \$1 a barrel. A proclamation to that effeet was issued and martial law was declared within fifty feet of each of the 3.106 wells within the proration area. M'llonal Guard, ien with fixed baronets were placed in control of the

twenty even of fields do not d. In his aid or the governor defended his retions on the grounds that he is protecting the natural resources of the state. A considerable portion of the proclamation was given to an mitick on the Harry Sinclair interests. the gravemer clara I that Sachier attempted to laste forty merters of the tegislature and to impeach the govproper that word in manhancel a Lorge off tobby during the tot session of the legislature and that the Sinat it empeter for entiting the others et to keede de la provotion of predae

IF WAS an eventful week in astation. I is fonet and Mes. Lindbergh flow up loyand the Arctic electe with specom pull precision and regret at Aklavik before proceeding to Bont Burrow. Parker Crowner was found to be us k ing an unannounced flight to Norway by the northern route, the news breaking when he landed at Angmagantik. Greenland. He was attempting to blize on air mall route to Cepenhagen for the Trans-American Afrilaes. He'ndon and Pangborn reached Tokio on their world electing flight, and planned to try for a nonstop trip from there to Seattle. Just before their arrival fo the Japanese capital Amy Johnson, the English aviatrix, also landed there.

NOTABLE among the deaths of the week was that of D. H. Anthony. who for years represented the Pirst Missouri district in congress. He was n very active and influential member of the lower house. Mr. Anthony was a nephew of Susan B. Anthony, the noted suffragist.

(& 111), Western Newspaper Union.)

WHY =All Money Is Not, Strictly,

Legal Tender Legal tender is money which a debtor may legally require his creditor to receive in payment of a debt in the ibsence of any special agreement in the contract or obligation likelf, says Pathfinder Magazine. No circulating medium is lawful money in the United States unless it has been given the legal tender quality by congress. Not all kinds of money possess legal tender qualities, yet all kinds circulate freely at par and are convertible into standard money. Since the gold dollar is the standard unit of value in the United States, gold coins and gold cortificates are legal torder in payment of all debts, public and private. United States notes popularly known as greenbacks, are full leval tender for all debts except duties on imports and interest on the public debt. Treasury notes of 1890 and standard sliver dol lars are legal tender for all debts, public and private, without regard to the amount except where otherwise expressly stipulated in the contract Silver certificates, Federal Reserve notes, National bank notes and Federal Reserve bank notes are not legal tender. Subsidiary silver coins—halfdollars, quarters and dimes-are legal tender for amounts not exceeding \$10 in any one payment. Minor coinsave and one cent pleces-are legal tender for amounts not exceeding 25 cents in nickels or pennies; it merely means that a person is not under legal obligations to accent more than that sum in such coins in single payment,

Why Weather Conditions

Affect Tidal Movements Contrary to a popular bellet, especially that long cherished by many seamen, tides do not exert any influence on the weather, according to reliable meteorologists. As a matter of fact, careful observers have discovered that certain extreme weather conditions affect the tides to some extent. Tides ebb and flow at every point on the coast with clocklike regularity. Notes theless, the weather continues to be fair or foul irrespective of those tides, On the other hand, conditions of very low becometer pressure and very strong winds from favorable directions cause either unusually low or unusual ly high tides as the case may be. This Is the influence of the weather on the tides, and the weather is not the result of any tidal influence. Even when flow of air as the tide subsides, this does that constitute a significant fea ture of the weather.

Stops Headache in Five Minutes

A Wonderful Formula Ends Aches and Pains Almost Like Magica-

Something Better and Safer Thousands of men and women are now stopping throbbing, sick, dizzy, militting hendaches, as well as the excuelating pains of thoumattem, neuritie, toothache, etc. with a payvelous new formula that said to be far superior to anything here! fore used.

It contains no aspirin, acotanilla, etc. and is absolutely safe and harmless. This remarkable for-mula, called A-VOL is being prescribed by thousands of doctors, dentists and welfare nurses because of the quick, efficient way it relieves all types of aches and pains without depressing the heart, or causing any other harmful effects. A-Vol quickly stops the most severe pain, leaving the patient refreshed and feeling fine. Especially effective in women's period pains. ETo quickly prove to yourself that this is truly a remarkable formula-just step into your nearest drugstore and get a package of A-VOL for a few cents. Take a couple of tablets right there. If your pairs is not gone in five minutes, the clerk will return your money.

Why Extent of Surface

Affects Pile of Coal The bureau of mines says that the heating of coal is believed to be a surface phenomenon. If a ton of bituminous cord could be delivered in a single cube, each dimension of the cube would be about 2.8 feet. When coal heats, it is due to something that goes on with respect to the surface and not something that happens inside of the piece. So far as is known, this is true no matter how finely the piece is divided. It is, therefore, interesting to know the area of the total expected surface in a ten of cont. If the cules, having originally an area of about 47 square feet, he continuously subdivided until all the pieces are fine enough Just to pass through a 10-mesh sercen. the area of exposed surface in one ton of coal becomes an nere. It is perfectly obelous from this why it is that trouble from spontaneous combustion originates in the coal, because the ireat increase in extent of surface does not begin until one gets below 113 Inch, or nut size. If fine coul is kept out of the plle, the heating surface is relatively so small as to remove the cause of spontaneous com-

hustlon,

· Variation in the Color of

Ocean Water The main reason why the son is such beautifully clear blue on bright, spany days is that it reflects the color of the sky; on a dull day you may find that the blue sea appears largely to have lost its color, and to have assumed a gravish tinge. Still, there is always a cerialo divish color about

have shown why this is so. ? When you take a con-water both you can see ut once that there is a slight difference between the color of this water and that which comes from the fresh-water tap. Chemists who have gone into the question believe that the blue flat is due to the presence of copfor salts. Copper is a great producer of blue colors. Place the tinlest plece in the fire, and in a few moments you will see brilliant blue tiames. Some of the copper salts again are deep blue in color.

Copper is known to exist in sen water, for it is washed out of the land and brought down to the sea by rivers. The salts which give the sea its blue color seem to be chiefly compounds of ammonia, in which sen water is very rich, and car per. Ammonia is present owing to the decomposition of the dend bodies of countless millions of sen crentures.

Why Surf "Breaks" Popularly but wroughy breakage of the surf is ascribed to friction against the bottom, whereby the upper part of the advancing wave is caused to fall forward. It is properly explained. nowever, as the result of the increusing height of the advancing wave (this being due to the transmission of the wave energy through a shallowing body of water) and of the decreasing volume of water toward the shore with which the growing wave is to be only up. When the supply is insufficient the wave form cannot be propagated forward, and then the wave crest falls

Archery Record

The National Archery associate of the United States says that the like flight shoot record made by shooting arrow with a longbow (wooden bow is 424 yards 2 feet 8 inches. This was made by L. L. Dailey of Monmont Ore, at the annual tournament of a National Archery association held Chiengo, Ill., August 12 to 15, 19 There is a report that in 1914 one is Simon made a flight shoot in Rugha of 462 yards 0 inches. In making a sen water, and recent investigations shot, however, he used a Turkish con posite how instead of the longity and, so far as we know, Mr. Dalley, shot, as given above, is a world recor for a wooden bow.-Washington Sic
